X613 Software Optimization and Update Notice

This upgrade involves synchronized updates to the App, Firmware (Algorithm), and Database. All components must be updated to the latest versions to ensure compatibility and optimal user experience.

Version Details & Upgrade Instructions

1. **App Version V1.0.53.** (Steps to Upgrade: Launch the Four-Wheel Alignment App> Connect to the device> Navigate to Parameter Settings> About> Upgrade App (bottom-right corner).

2. **Overseas Database Version V1.0.17.** (Steps to Upgrade: Launch the Four-Wheel Alignment App> Connect to the device> Go to Database> Select Database> Upgrade Database (bottom-right corner).

Critical Note: The App must be updated to V1.0.53 first; outdated App versions will cause database failures.

3. **Firmware Version V02.89.** (Steps to Upgrade: Launch the Four-Wheel Alignment App> Connect to the device> Navigate to Device Management> Upgrade Firmware (bottom-right corner).

Key App Improvements

- a. Resolved unstable connectivity issues for PAD5 and PAD7 devices.

- b. New Add Four-Wheel Alignment Demo Mode.
- c. Dynamic Kingpin Data Display: Real-time monitoring during adjustments.
- d. Data Freeze Function: Supports secondary lifting in chassis repairs.
- e. Enhanced error detection for Measurement Unit and Target Installation misalignment.
- f. Improved Front Axle Toe Calculation to eliminate post-adjustment vehicle deviation.
- g. Data Visualization: Added orange alerts for threshold values.
- h. Streamlined Activation Interface with context-specific error prompts.
- i. Fixed miscellaneous known bugs.
