

Comprehensive Diagnostic Tools New Function: Topology Map

Dear All,

Recently, we release a new function on X-431 Pad VII and X-431 Pad V. it is topology map function:

The topology map refers to the physical layout diagram of the interconnection of the vehicle control modules. The topology map does not show the physical connections of the sensors and actuators within each, or the distance between the nodes of each control module, but only shows the relationship between the vehicle control modules in the form of a graph.

By topology map, we can understand the vehicle bus branch categories, also it helps us understand the distribution of vehicle control modules on the bus. The working status of the control modules of each node displayed on the topological bus helps to judge whether there is a fault or abnormality.

This function is available in :

- Peugeot V43.75 and above,
 - Audi V28.76 and above
 - VW V28.70 and above
 - Toyota V49.85 and above
 - Mitsubishi V33.70 and above
 - Honda V47.90 and above
 - Chrysler V33.35 and above
 - Mazda V42.40 and above
 - Suzuki V38.05 and above
 - Maserati V11.20 and above
-
